

High quality in-line mineralizing cartridge
they contain high quality mineralising deposit,
which enriches water with elements such as: calcium and magnesium

Water mineralisation

Water taste improvement

It matches the majority
of filtering systems available
on the market

They contain high quality
mineralising deposit

www.supremefilters.com

Description:

A linear mineralising cartridge enriches water in elements necessary for the human body, such as calcium and magnesium, present in concentrations comparable to their concentrations in bottled mineral waters present on the market.

The cartridge is compatible with most RO systems available on the market. It has a valid attestation of the Polish National Institute of Hygiene (PZH) which allows the product to come into contact with potable water.

Technical information:

- dimensions - 254 x 52 (mm)
- thread diameter - 1/4" FIP
- efficiency - 2,9l/min
- work. temp. - 2°C - 45°C
- longevity* - 6-12 months

* the service life of the cartridges depends on the quality of raw water.

Advantages:

- They contain high quality mineralising deposit, which enriches water with elements such as: calcium and magnesium
- It matches the majority of filtering systems available on the market
- Competitive price
- Quick delivery of orders
- High quality
